Clinical Laboratory

Creatinine Clearance

Patient instruction sheet for collecting a 24-hour urine sample for creatinine clearance.

Your physician has ordered a creatinine clearance. This test requires a 24-hour urine collection **and a blood specimen**. The lab has provided a container for storing the urine during the collection period. This container should be *refrigerated* at all times during the collection.

When the urine specimen is delivered to the lab, a blood specimen will be drawn.

Patient Collection Instructions:

1. Void completely before beginning the collection. Discard this urine.
2. Note the date and beginning time of the collection and determine the ending time (24 hours later).
3. Collect all urine during this time period. **Keep refrigerated during collection.**
4. At the ending time, empty your bladder and add this final urine specimen to the container.
5. Transport sample as soon as possible with the doctor's requisition and this instruction sheet to any of the following locations:
